---

The configuration can take place via the XT-Admin XXL or directly via Telnet or the browser. The configuration via the according methods is explained below.

## **Requirements:**

We recommend you to read the manual conscientiously before configuring your adapter. Please follow all recommendations, notes and warnings to ensure that a flawless operation is guaranteed.

# XT-Admin XXL

The main menu will be displayed after starting **XT-ADMIN XXL**:

1. All interfaces in your network range will be shown here, no matter if the IP address is reachable at this point or not.
2. With a click on the „plus“ the interfaces will be expanded. If no „plus“ is shown, the interface cannot be reached.
3. Pressing the „Refresh“-Button will refresh the list. Please make sure „Poll“ is active.

## Note:

If an interface is not listed, it might be out of your networks range or your firewall blocks it. Please check your settings accordingly and/or connect the adaptor directly to your computer.

# Set up a static IP-Address in XT-Admin XXL

## Note:

In factory settings **DHCP** is used and the IP-Address is preconfigured to: **192.168.100.100**

To set a new static IP-Address, please press the „Set-IP“-Button **(4)**.

If the interface was selected correctly, the IP-Address from the „Set-IP“-Window will be used. Please make sure that all, even the greyed-out, fields are filled.

When this is done, all you need to do is to enter the desired IP-Address in the entry field **(5)** and press the OK button **(6)** to accept the changes. After pressing the „Refresh“ button **(3)** your interface with the new IP-address will be displayed in the list **(1)**.

# Set up the IP-Address manually

Open **Telnet** or a **Browser**\* (e.g. Internet Explorer, Netscape, Firefox) and connect to the **IP-Address** of the signotec Ethernet-USB-Adapter to set it up. Both functions can be used through XT-Admin XXL.

## Connecting via Telnet:

In order to use Telnet please click „Run“ from the Start menu and enter:

**telnet IP-ADDRESS**

for example: telnet 192.168.0.1

The telnet command can be entered directly via command line as well.

## Connecting via Browser:

In order to connect via Web-Interface, please open a browser, switch to the addressbar and enter:

**http://IP-ADDRESS**

for example: http://192.168.0.1

After connecting to the interface you will be asked for your password.

The **Standard-Password** is: **xt**

## Note:

After all settings have been configured, please go back to the main menu and restart your interface.

Your settings will active once the device rebooted.
